

Confidential Safety Incident Reporting: NASA Aviation Safety Reporting System

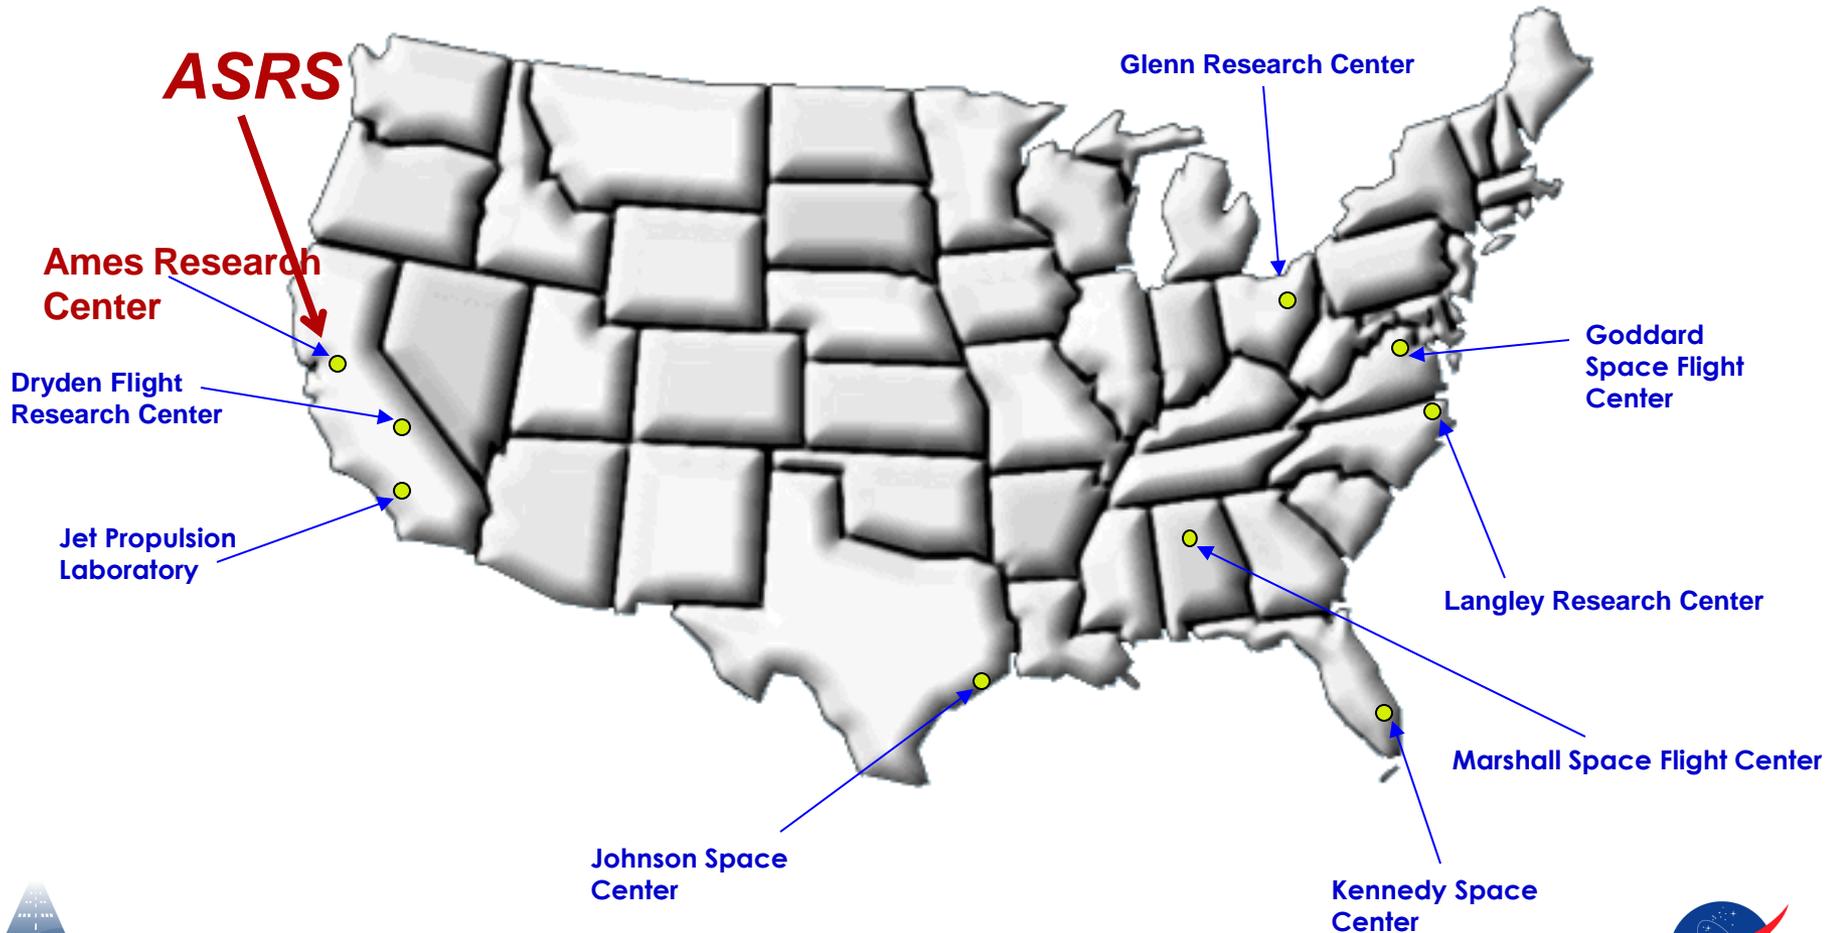

February 2014

**AVIATION SAFETY
REPORTING SYSTEM**

Linda Connell, NASA ASRS Director
Human Systems Integration Division
NASA Ames Research Center

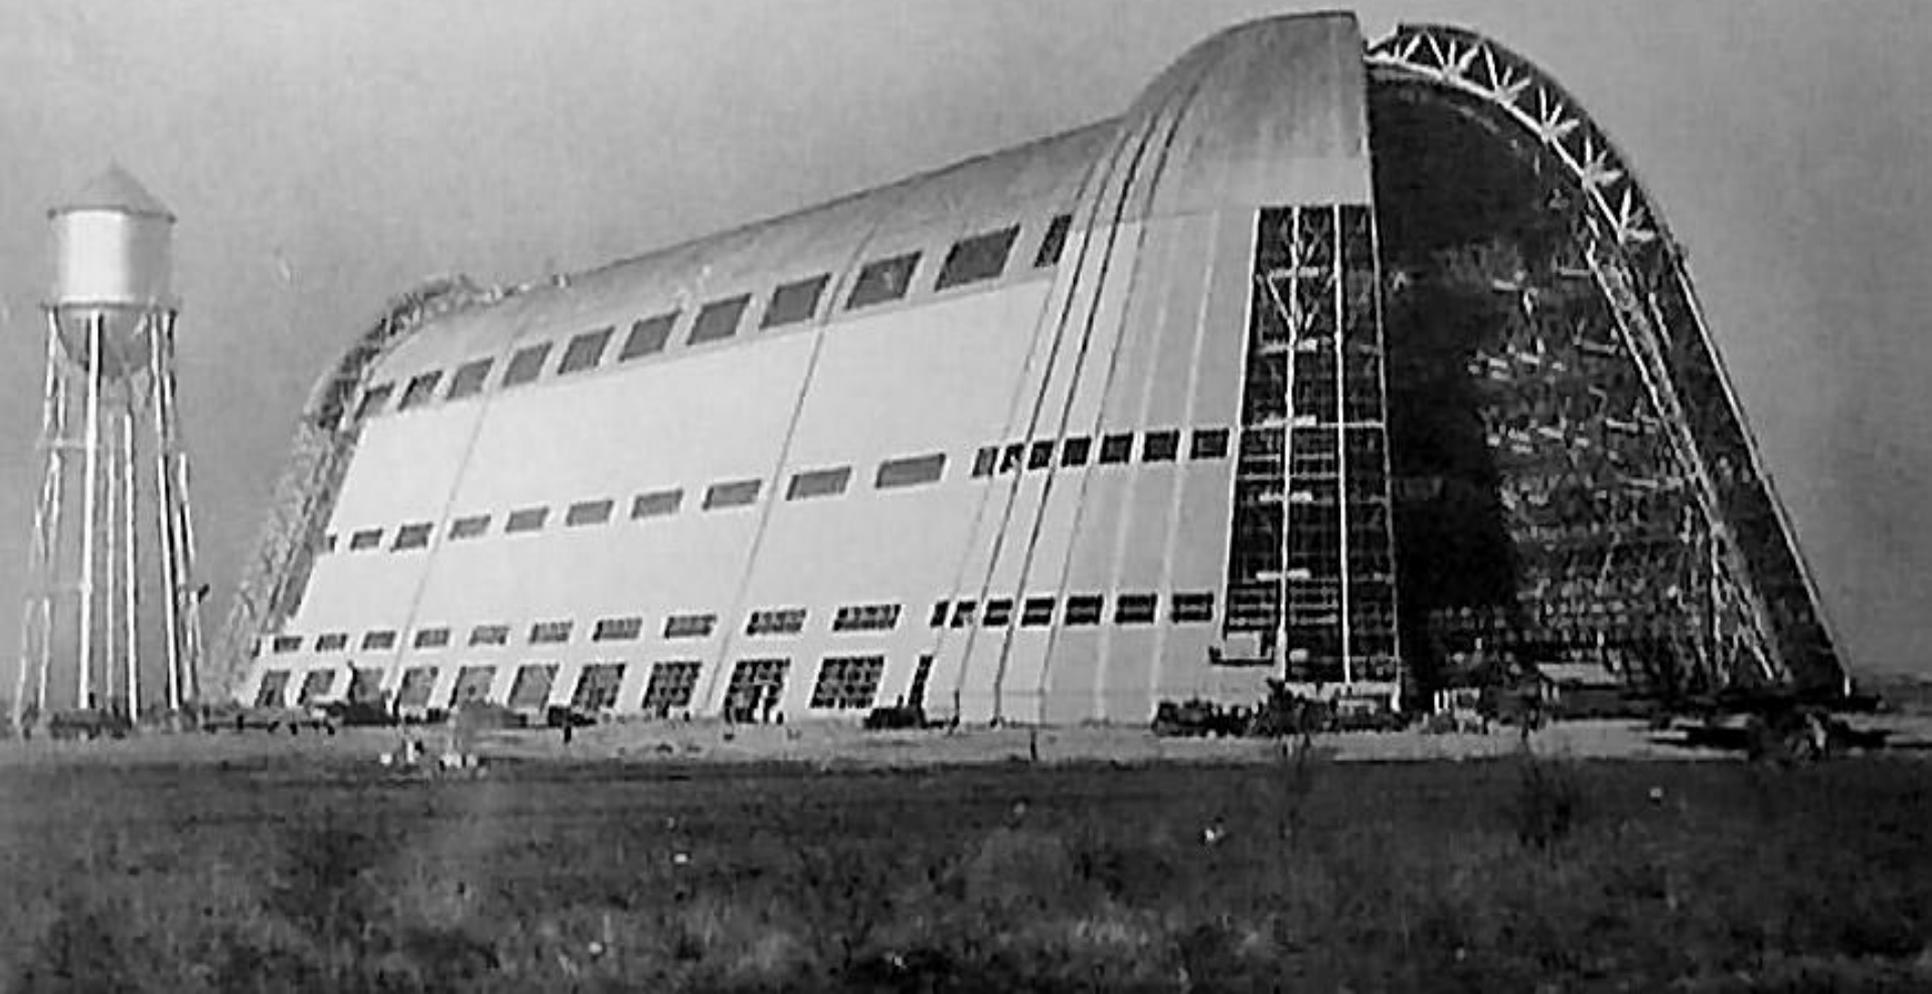

NASA Aviation Safety Reporting System

Aviation Safety Reporting System

Moffett Field - Hangar One
1932

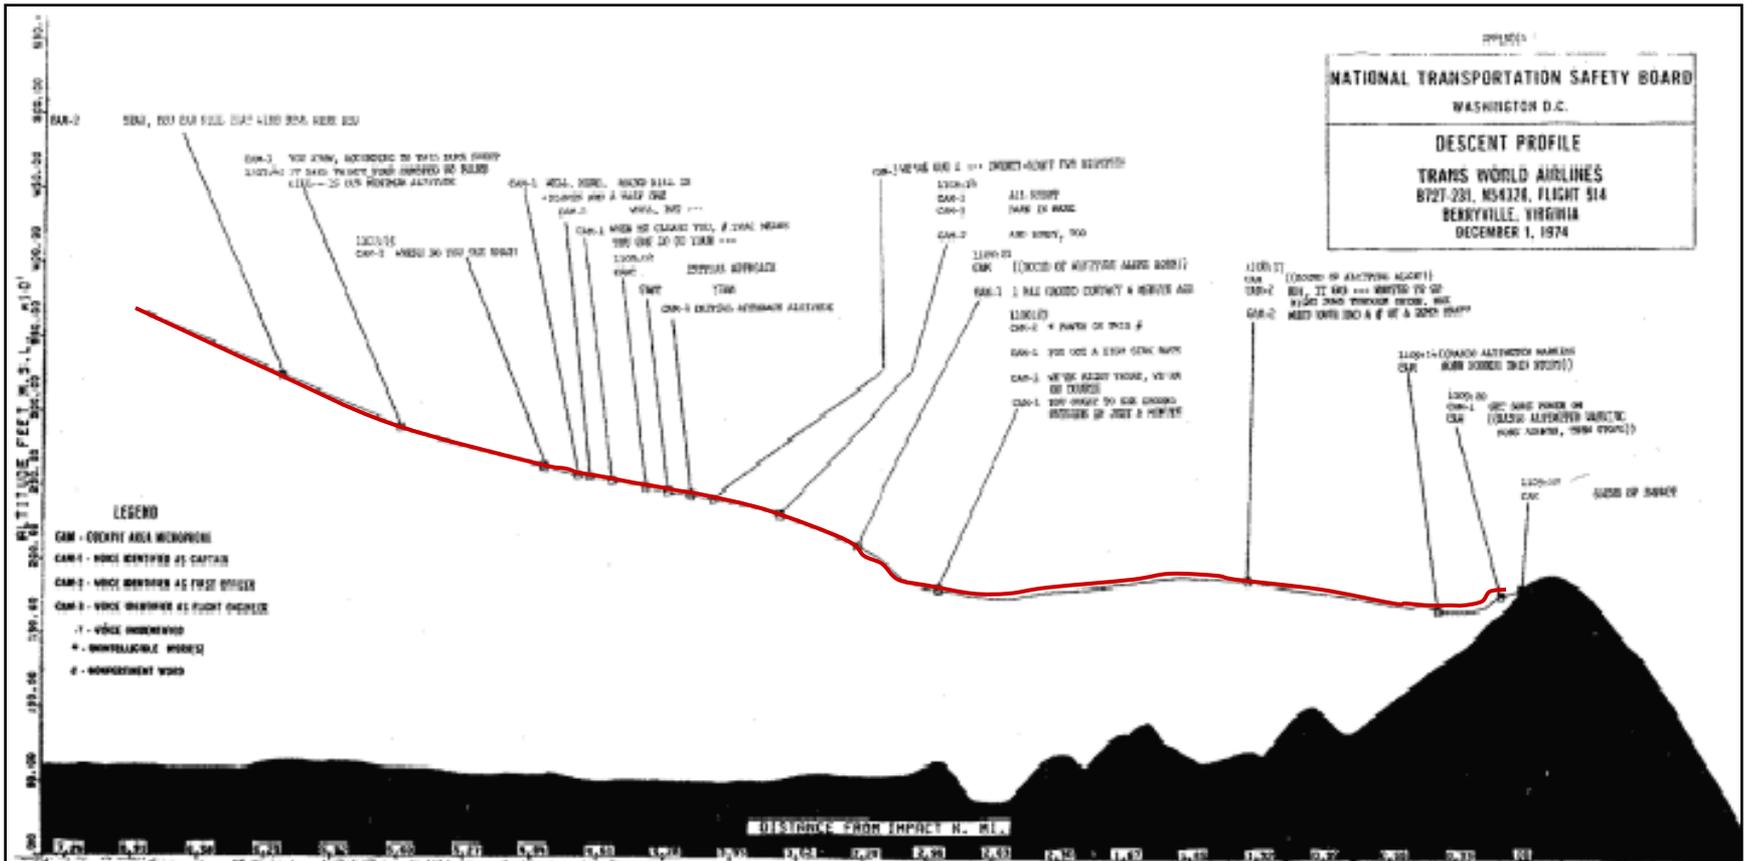

ASRS History and Background

February 2014

**AVIATION SAFETY
REPORTING SYSTEM**

Aviation Tragedy Leads to Genesis of ASRS

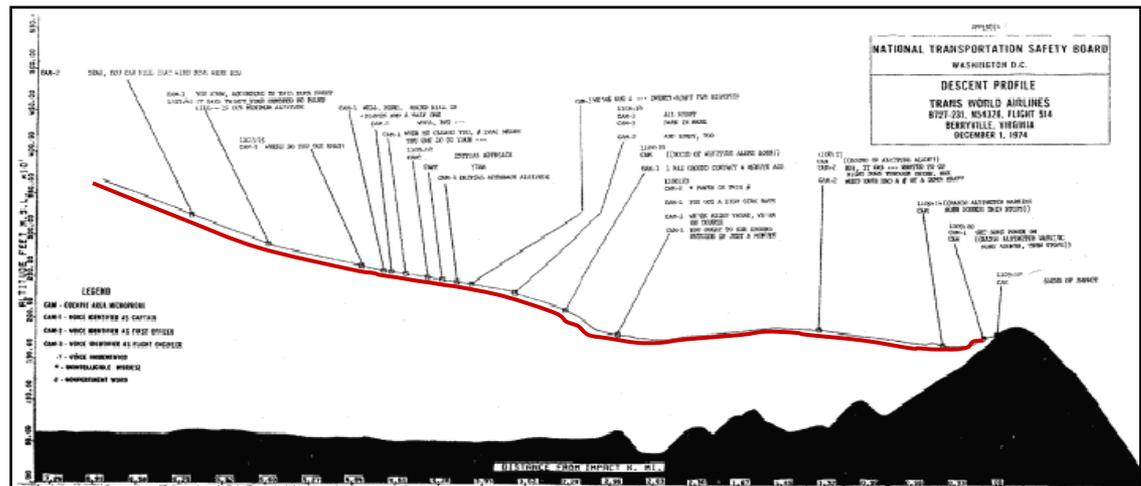

TWA 514, December 1, 1974

ASRS History

- The ensuing investigation revealed that six weeks prior, a United Airlines crew had experienced an identical ATC misunderstanding and narrowly missed the same mountain.
- At the time there was no method of sharing the United pilot's experience with TWA and other airline operators.
- This solidified the idea of a national aviation reporting program that would enable information sharing.
- In April 1976, NASA and FAA implemented the Aviation Safety Reporting System (ASRS)

FAA and NASA Partnership

MOA signed by Administrators for FAA and NASA

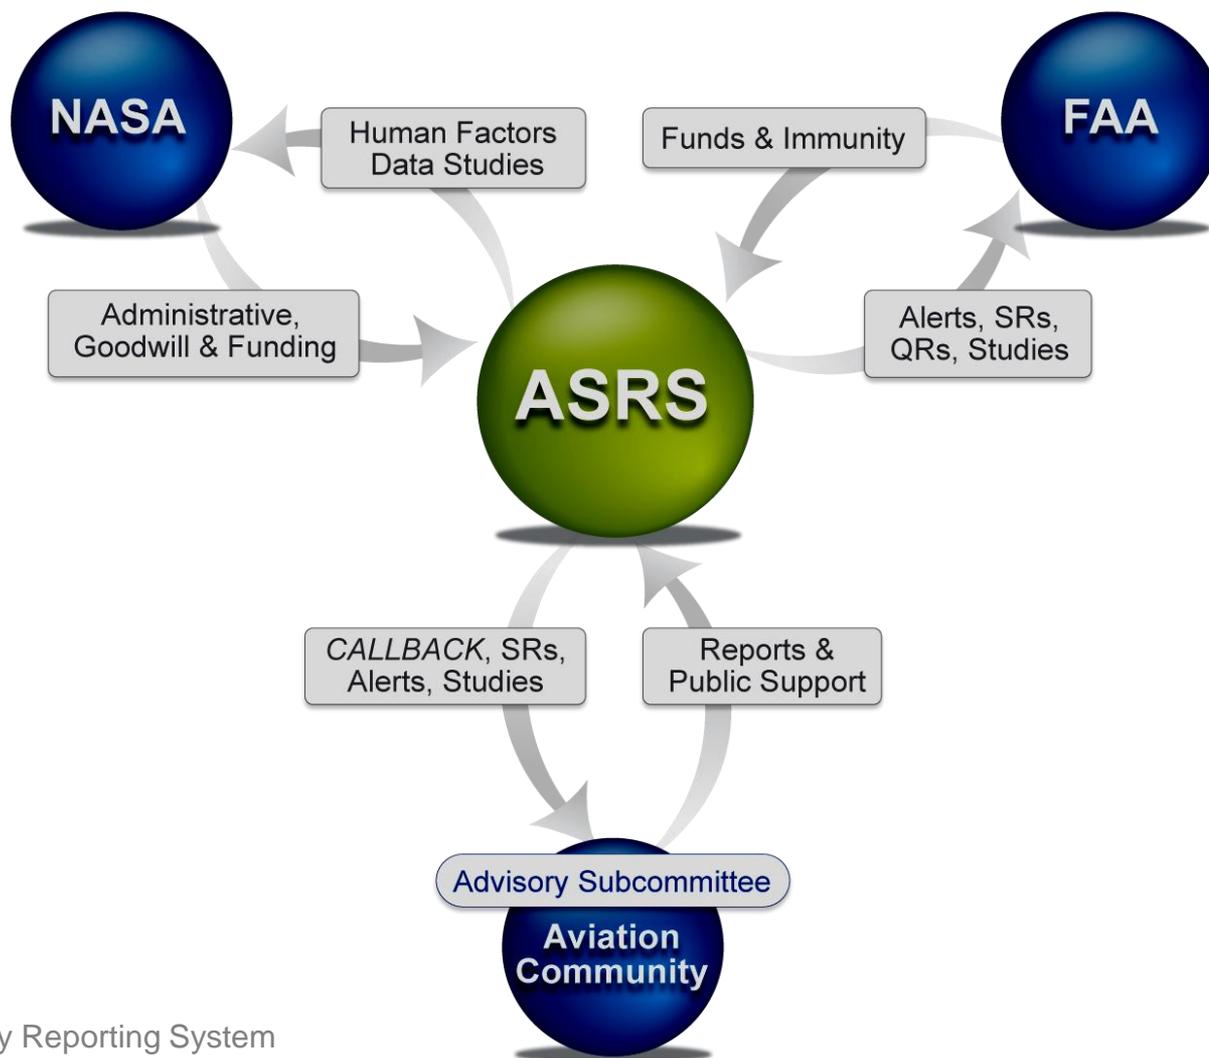

... To provide information to the FAA and the aviation community to assist them in reaching the goal of identifying and eliminating unsafe conditions to prevent accidents.

Aviation Safety Reporting System

ASRS Stakeholders

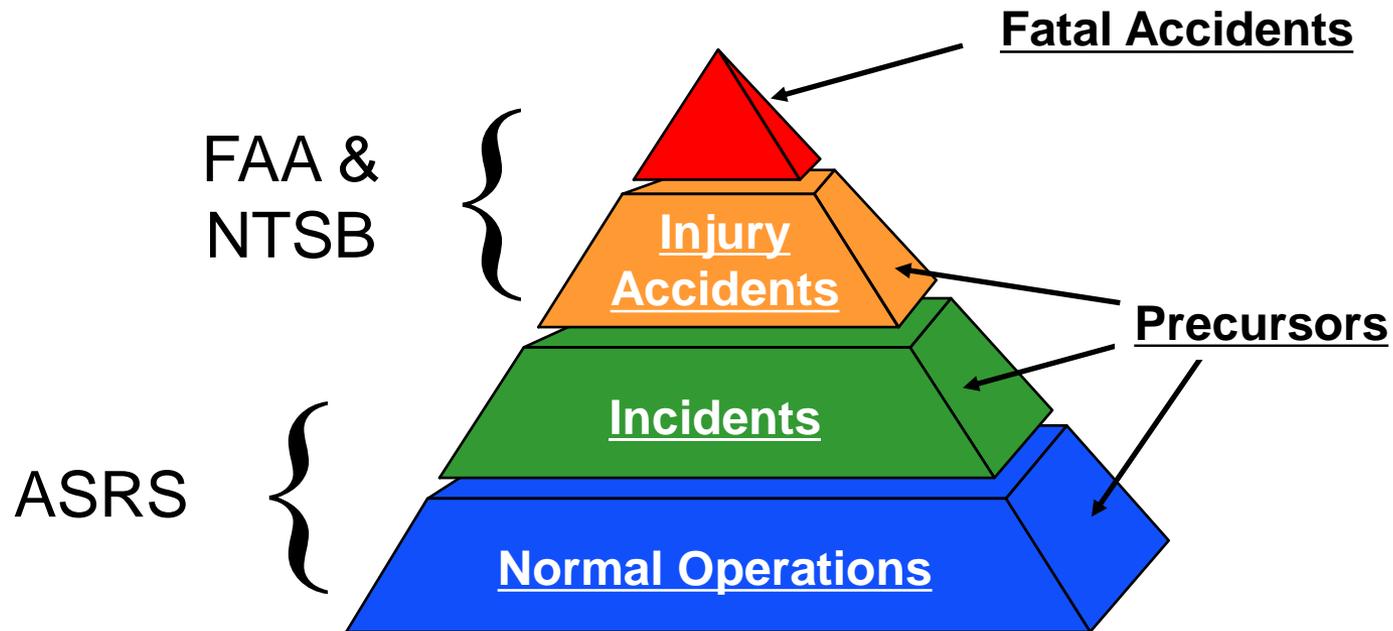

What is Safety Reporting?

Aviation Safety Reporting System

System-Wide Event Occurrences

ASRS is Complementary to Other Systems of Reporting

Aviation Safety Reporting System

ASRS Principles

VOLUNTARY PARTICIPATION

Aviation personnel voluntarily submit reports concerning events related to safety for the purpose of system alerting, understanding and learning

CONFIDENTIALITY PROTECTION

Protection of identity is provided by NASA through de-identification of persons, companies, and any other information

NON-PUNITIVE

FAA will not use, nor will NASA provide, any report submitted for inclusion under ASRS guidelines or information derived therein for use in any disciplinary or other adverse action (14CFR91.25 & AC 00-46E)

INDEPENDENT

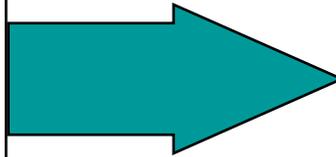

Necessary for trust building and unbiased dissemination of safety information

ASRS Purposes

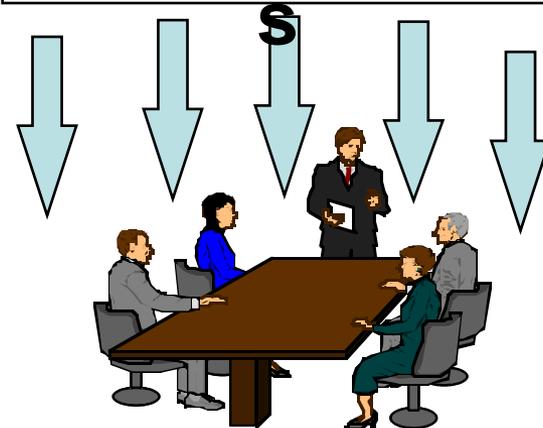

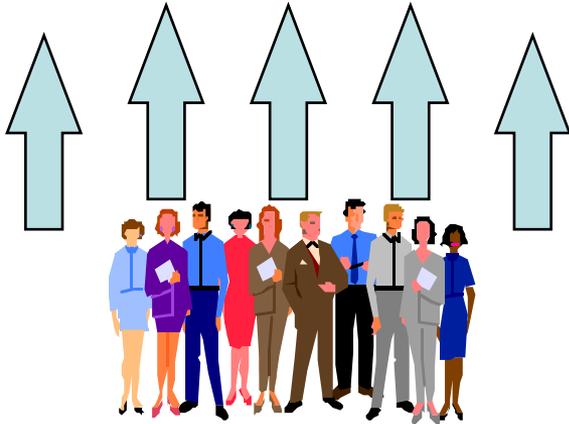

ALERTS

**Identify
Deficiencies
and
Discrepancies**

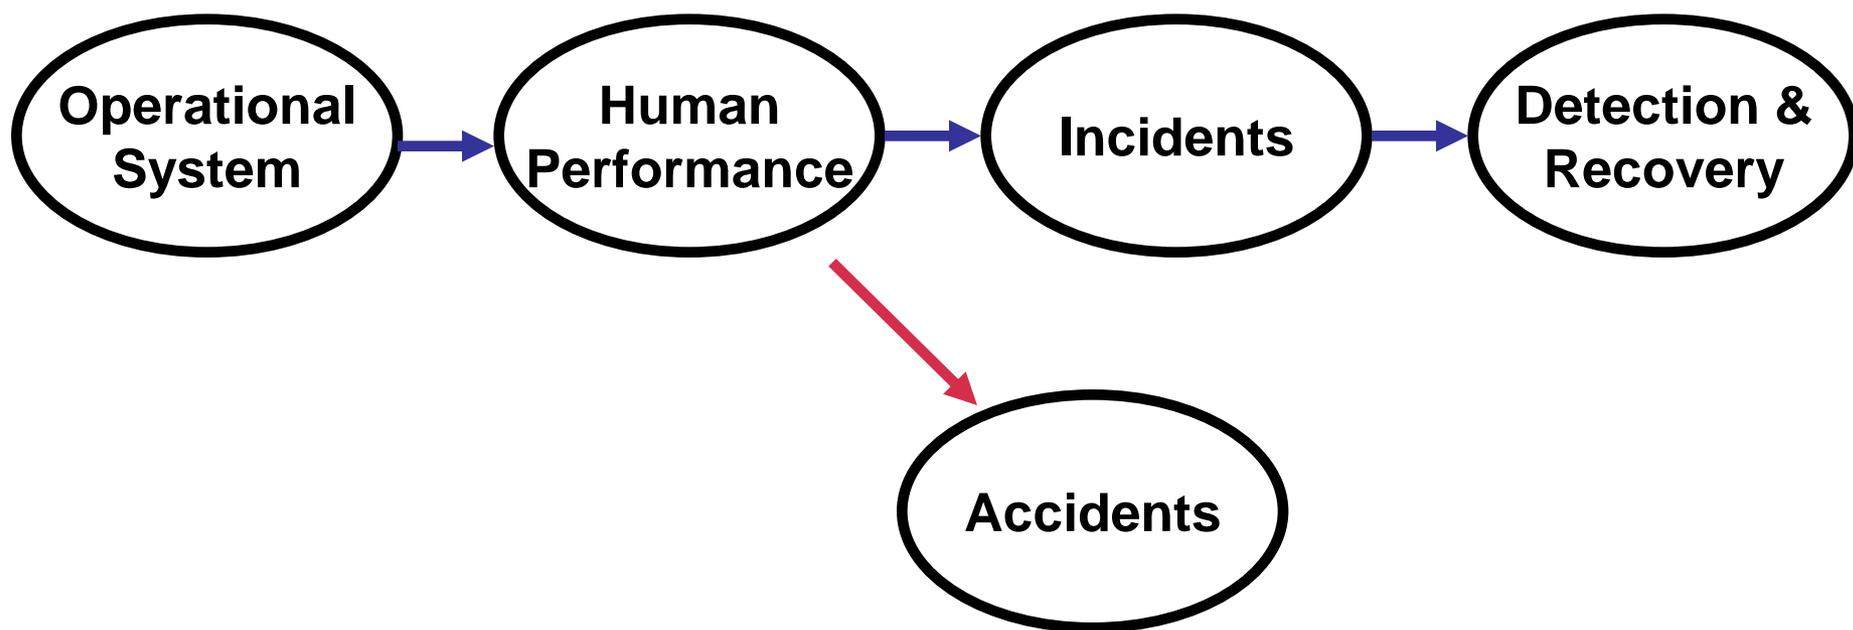

PRODUCTS

**Provide Data
for Planning
and
Improvement**

Simplified Event Chain

THE HUMAN FACTOR

Human Performance Contributions to Errors

Aviation Safety Reporting System

March 24, 1989- The Exxon Valdez runs aground off Alaska, spilling 11 million gallons of Alaska North Slope crude oil.

October 2000- Oil Tanker runs aground off the Galapagos Islands, endangering fragile ecosystem.

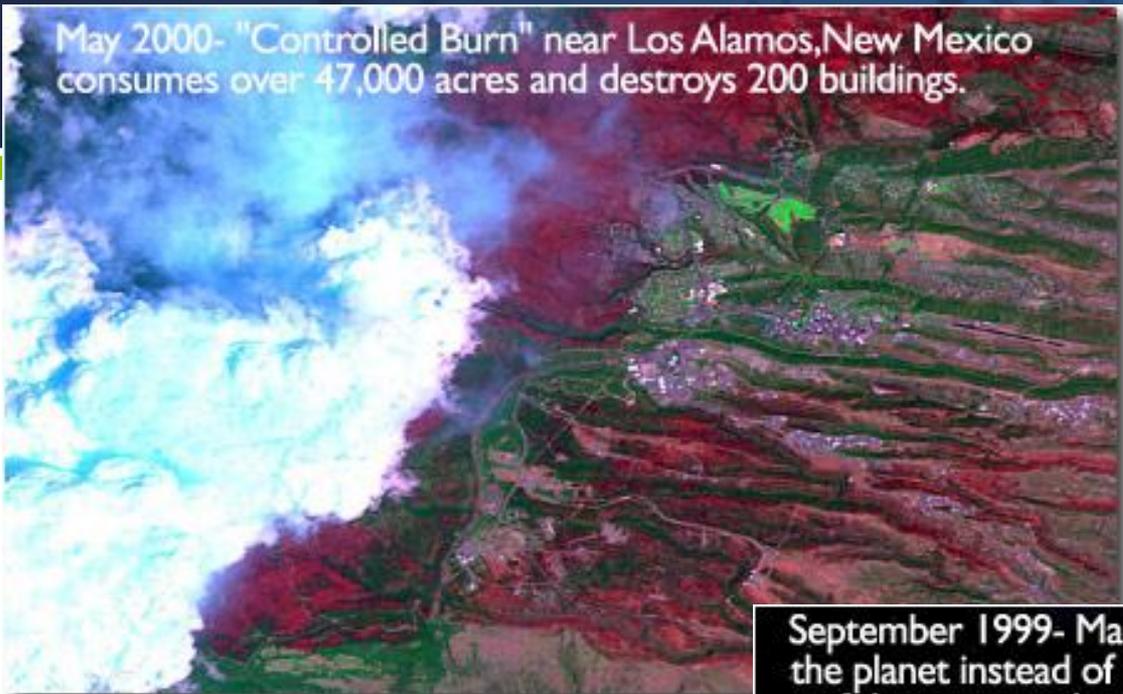

April 26, 1986- Chernobyl Nuclear PowerPlant, site of the worst reactor disaster ever. A reactor fire and a massive escape of radioactive materials into the atmosphere.

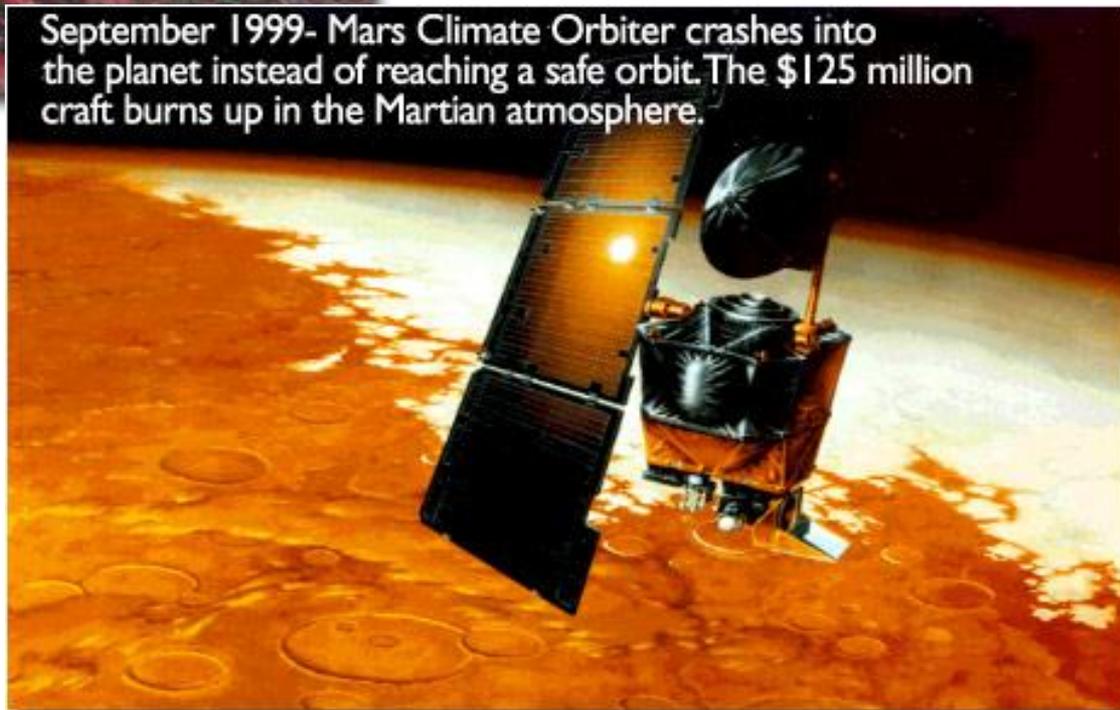

March 28, 1979- Three Mile Island Nuclear Power Station experiences a partial reactor meltdown.

May 2000- "Controlled Burn" near Los Alamos, New Mexico consumes over 47,000 acres and destroys 200 buildings.

September 1999- Mars Climate Orbiter crashes into the planet instead of reaching a safe orbit. The \$125 million craft burns up in the Martian atmosphere.

Aviation Safety Reporting System

Why Safety Reporting is Essential for Safety?

Aviation Safety Reporting System

WHY CONFIDENTIAL REPORTING WORKS

- When organizations want to learn more about the occurrence of events, the best approach is simply to ask those involved.
- People are generally willing to share their knowledge if they are assured:
 - > Their identities will remain protected
 - > There is no disciplinary or legal consequences
- A properly constructed *confidential, voluntary, non-punitive, independent* reporting system can be used by any person to safely share information

ASRS Purpose and Mission

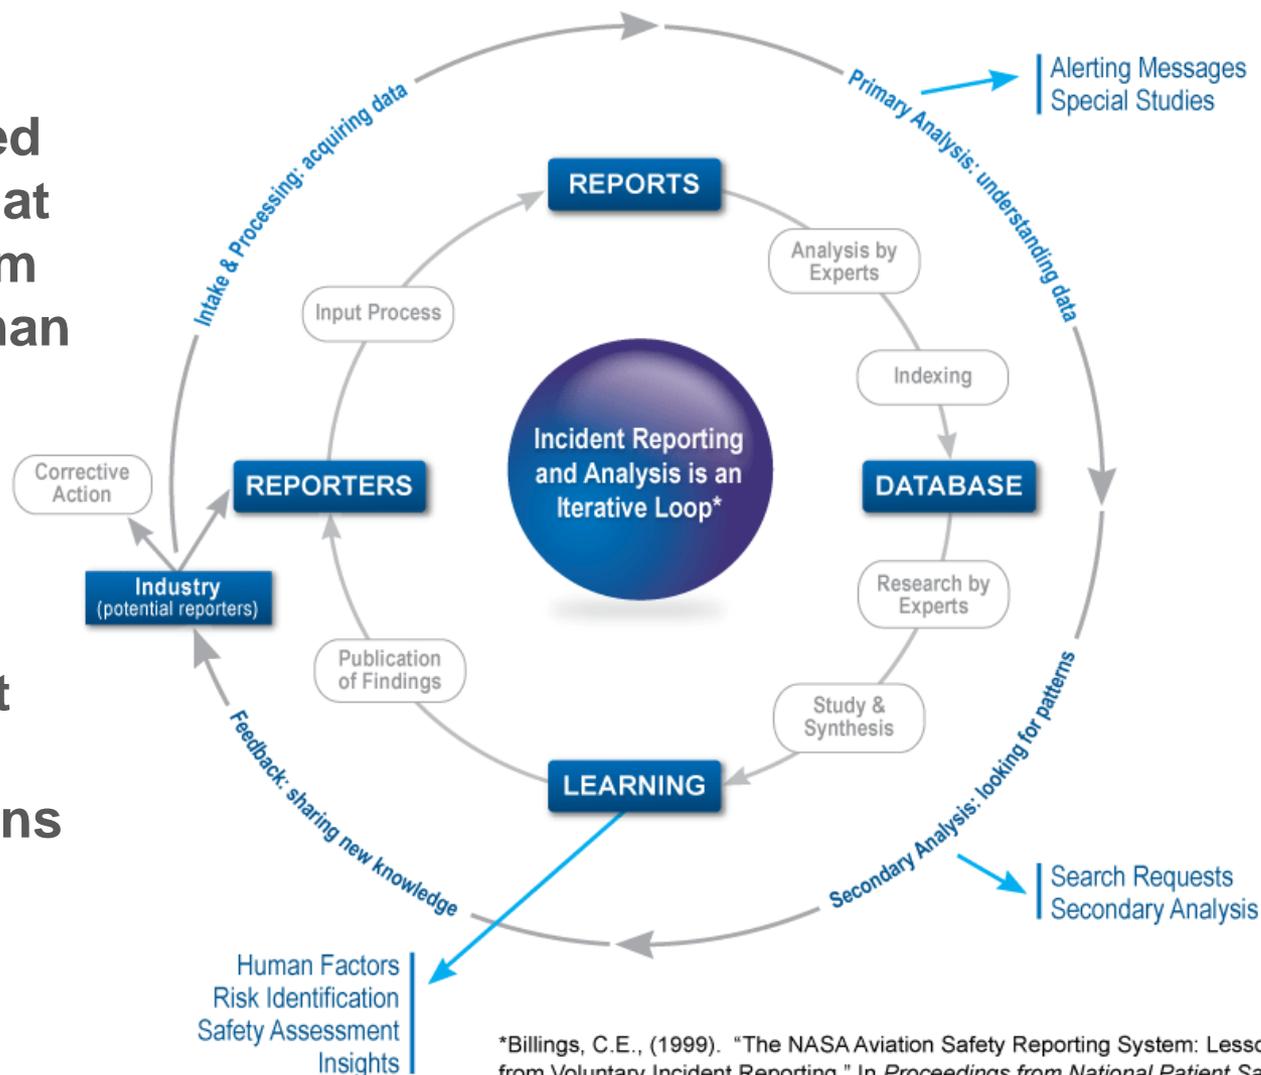

Identify deficiencies and discrepancies in the National Airspace System

Provide data for planning and improvements to the future National Airspace System

Incident Reporting Model

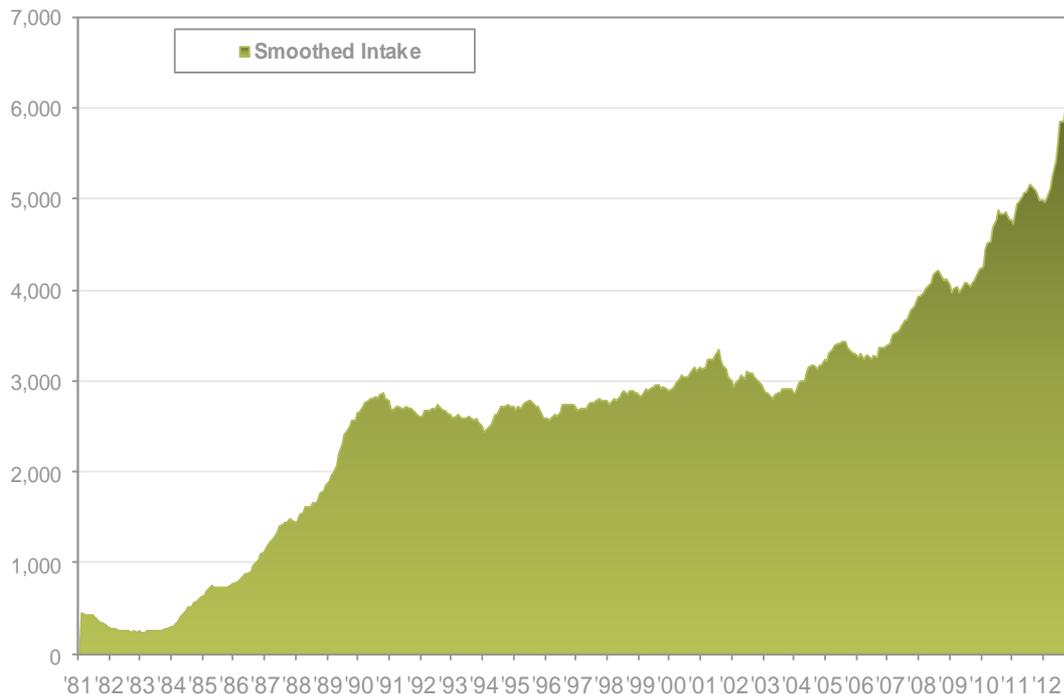

- ASRS is a closed loop process that supports System Safety and Human Factors
- Government / Industry are provided information that may result in corrective actions

ASRS Report Volume Profile

- 37 years of confidential safety reporting
- Over 1,100,000 reports received
- Over 5,550 alert messages issued
- Over 6,700 reports per month, or 322 per working day
- Total report intake for 2012 was 71,540
- Current rate estimate for 2013 is over 80,000

Monthly Intake
January 1981 – December 2012

U.S. Aviation Statistics *

■ FAA Aviation Personnel *

• Pilots	618,707
• Air Traffic Controllers	14,305
• Dispatchers	21,664
• Mechanics	314,931
• Flight Attendants	170,155

■ Active Aviation Labor Force **

• Pilots - Commercial/ATP	99,980
• Aircraft Mechanics	35,070
• Flight Attendants	87,190

Potential Aviation Reporters

TOTAL (Est.) 1,139,795

Flight Volume ***

62,000 Flights/Day (Air Carrier, Cargo, Military)

27,178 Flights/Day (General Aviation)

Aviation Safety Reporting System

* July 2012 FAA Certification Database

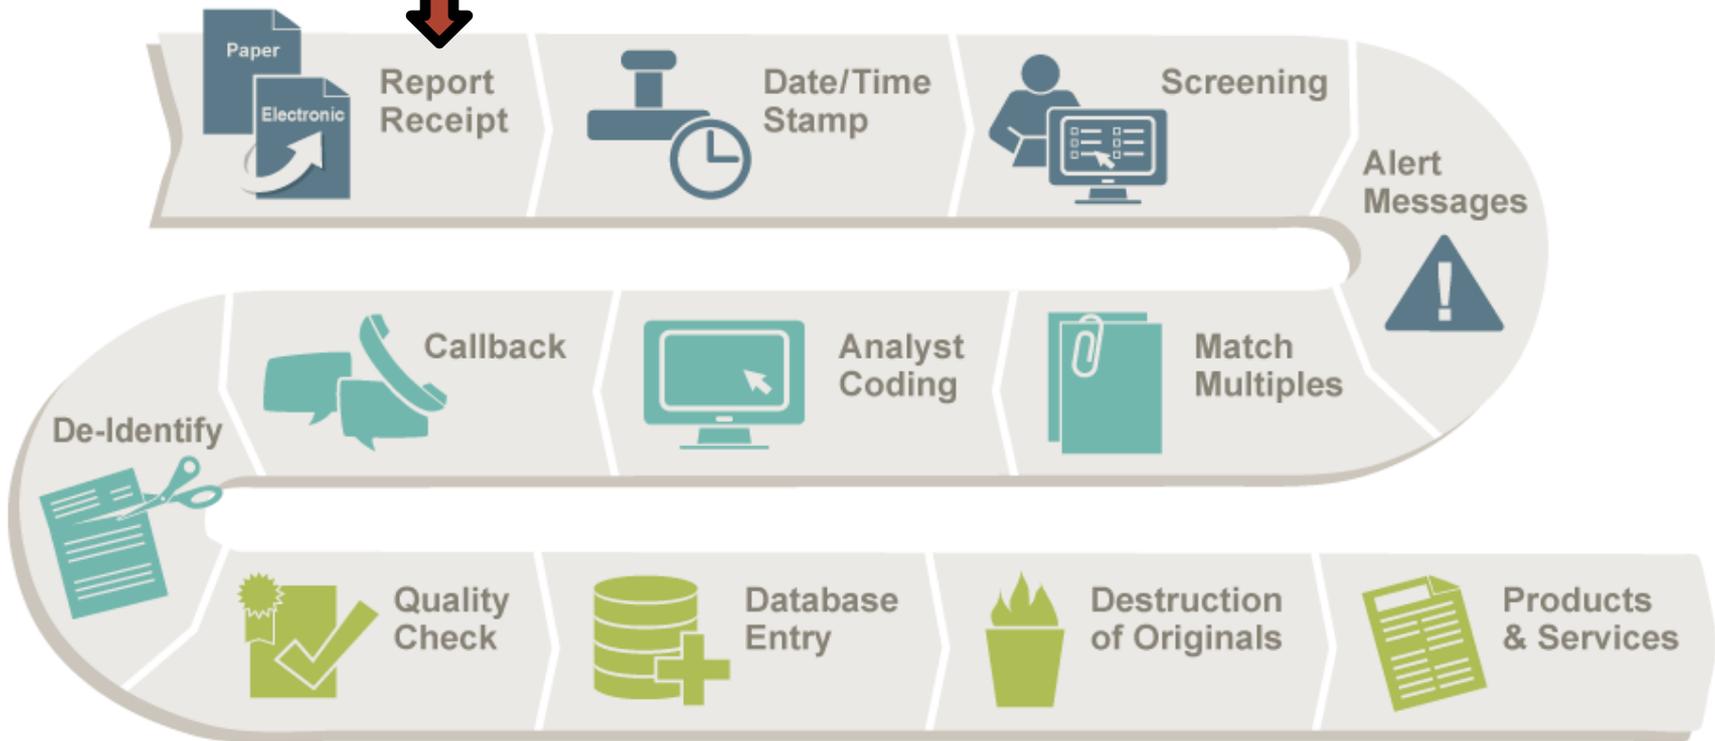

** 2011 Bureau of Labor Statistics

*** RITA Statistics

Report Processing Flow

Airline Safety Action Program (ASAP) and Air Traffic Safety Action Program (ATSAP) reports

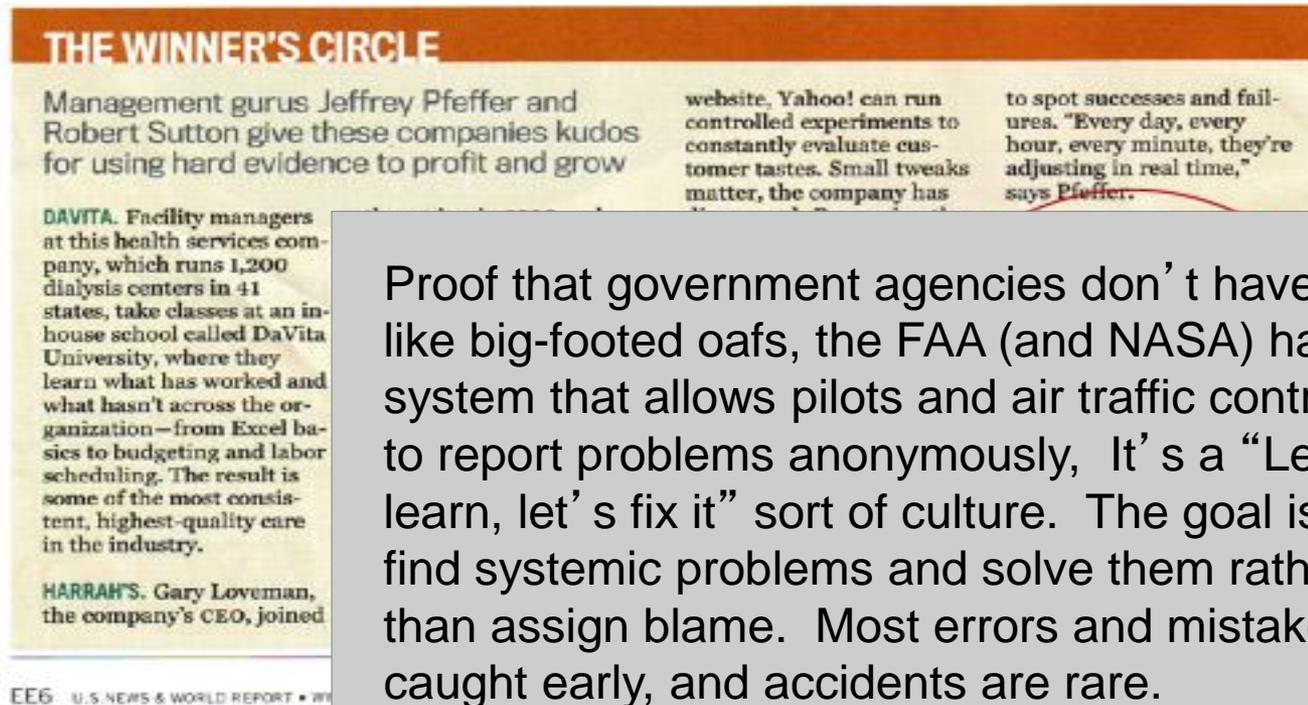

All reports are routed through a differential processing analysis flow

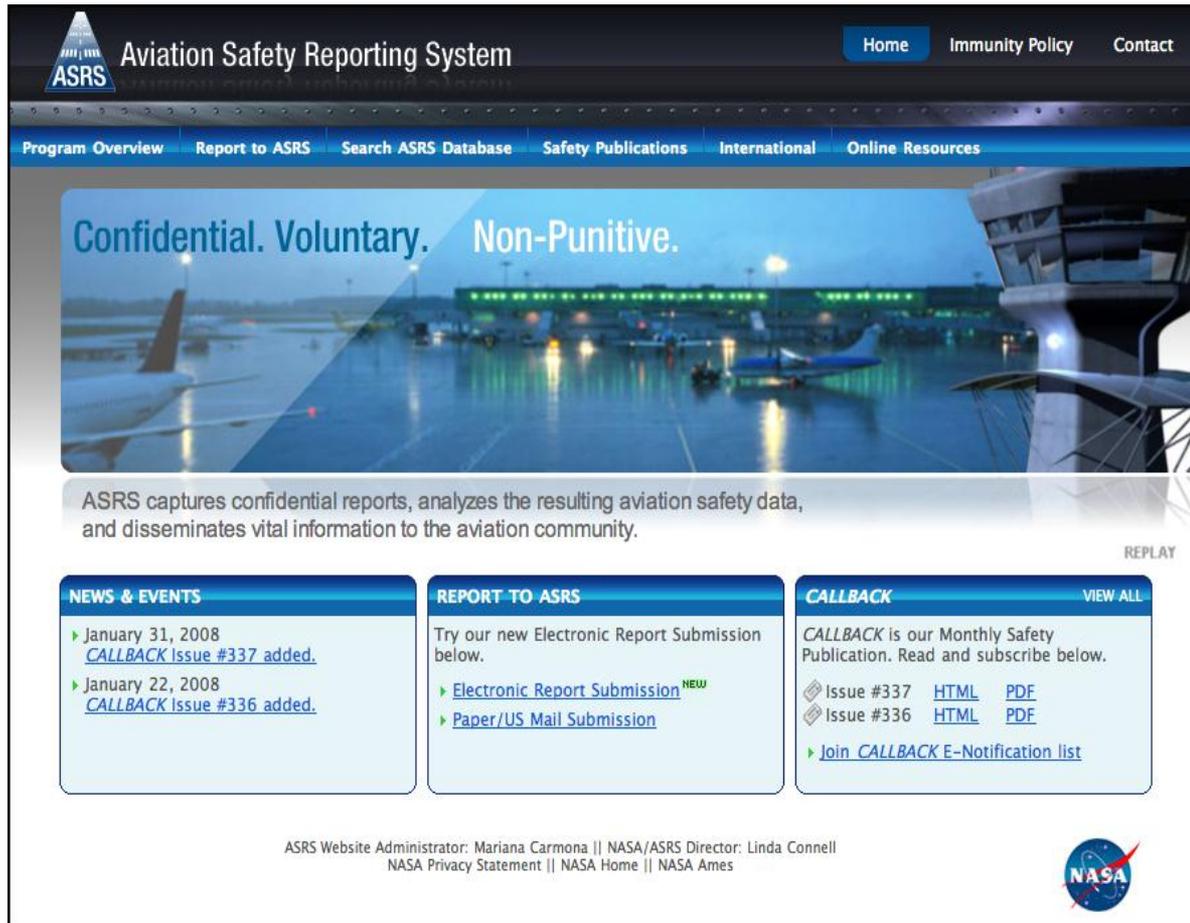

System Recognition for Effectiveness

US News and World Report 2006 praises system

- FAA credited for a positive, proactive approach to safety

ASRS Web Site

The screenshot shows the ASRS website homepage. At the top left is the ASRS logo. The main header reads "Aviation Safety Reporting System" with navigation links for "Home", "Immunity Policy", and "Contact". Below this is a secondary navigation bar with links for "Program Overview", "Report to ASRS", "Search ASRS Database", "Safety Publications", "International", and "Online Resources". The main content area features a large banner with the text "Confidential. Voluntary. Non-Punitive." over a background image of an airport at night. Below the banner is a paragraph: "ASRS captures confidential reports, analyzes the resulting aviation safety data, and disseminates vital information to the aviation community." There are three main content boxes: "NEWS & EVENTS" listing two recent "CALLBACK" issues, "REPORT TO ASRS" with links for "Electronic Report Submission" and "Paper/US Mail Submission", and "CALLBACK" with links for "Issue #337" and "Issue #336" in HTML and PDF formats, plus a link to "Join CALLBACK E-Notification list". At the bottom, there is a footer with contact information for the website administrator and director, a NASA logo, and a "REPLAY" button.

- ▶ Launched October 2007
 - Over 10 million sessions in 2008
- ▶ File an ASRS Report
 - Electronic
 - Print and Mail
- ▶ Database Online
- ▶ ASRS Publications
- ▶ Program Information
- ▶ Immunity Policies

Aviation Safety Reporting System

ASRS Database Online (DBOL)

The screenshot displays the ASRS Database Online (DBOL) search interface. At the top, there are navigation links: "Begin", "Results", and "View". On the right side, there are links for "New Search", "Help", and "Contact Support". Below the navigation, there is a "How to Search:" section with instructions: "Step 1: Click + to add search items." and "Step 2: In 'Current Search Items' section, select 'Click Here' in a statement and choose items from Lookup Window." The main search area is divided into several sections, each with a plus sign (+) to expand the search criteria:

- Date & Report Number**:
 - + Report Number (ACN) was [number]
 - + Date of Incident was between [date] and [date]
- Environment**:
 - + Flight Conditions were [conditions]
 - + Lighting was [condition]
 - + Weather was [element]
- Aircraft**:
 - + Federal Aviation Regs (FAR) Part was [regulation]
 - + Flight Plan was [type]
 - + Flight Phase was [phase]
 - + Make / Model was [type]
 - + Mission was [operation]
- Place**:
 - + Location was [identifier]
 - + State was [abbreviation]
- Person**:
 - + Reporter Organization was [type]
 - + Reporter Function was [position]
- Event Assessment**:
 - + Event Type was [anomaly]
 - + Detector was [equipment / human]
 - + Primary Problem was [most prominent factor]
 - + Contributing Factors were [problem areas]
 - + Human Factors (since 6/09) were [factor]
 - + Result was [consequence]
- Text: Narrative / Synopsis**:
 - + Text contains [word(s)]

At the bottom, there is a "Current Search Items:" section and two buttons: "Back" and "Run Search".

- ▶ DBOL launched August 23, 2006
 - Over 70,000 total online queries completed to date
 - Over 20,966 queries completed in 2009
- ▶ Fixed field and text search capability
- ▶ Data formats (export)
 - MS Word, Excel, CSV, HTML
- ▶ Experts version (DBOL II) being proposed

Aviation Safety Reporting System

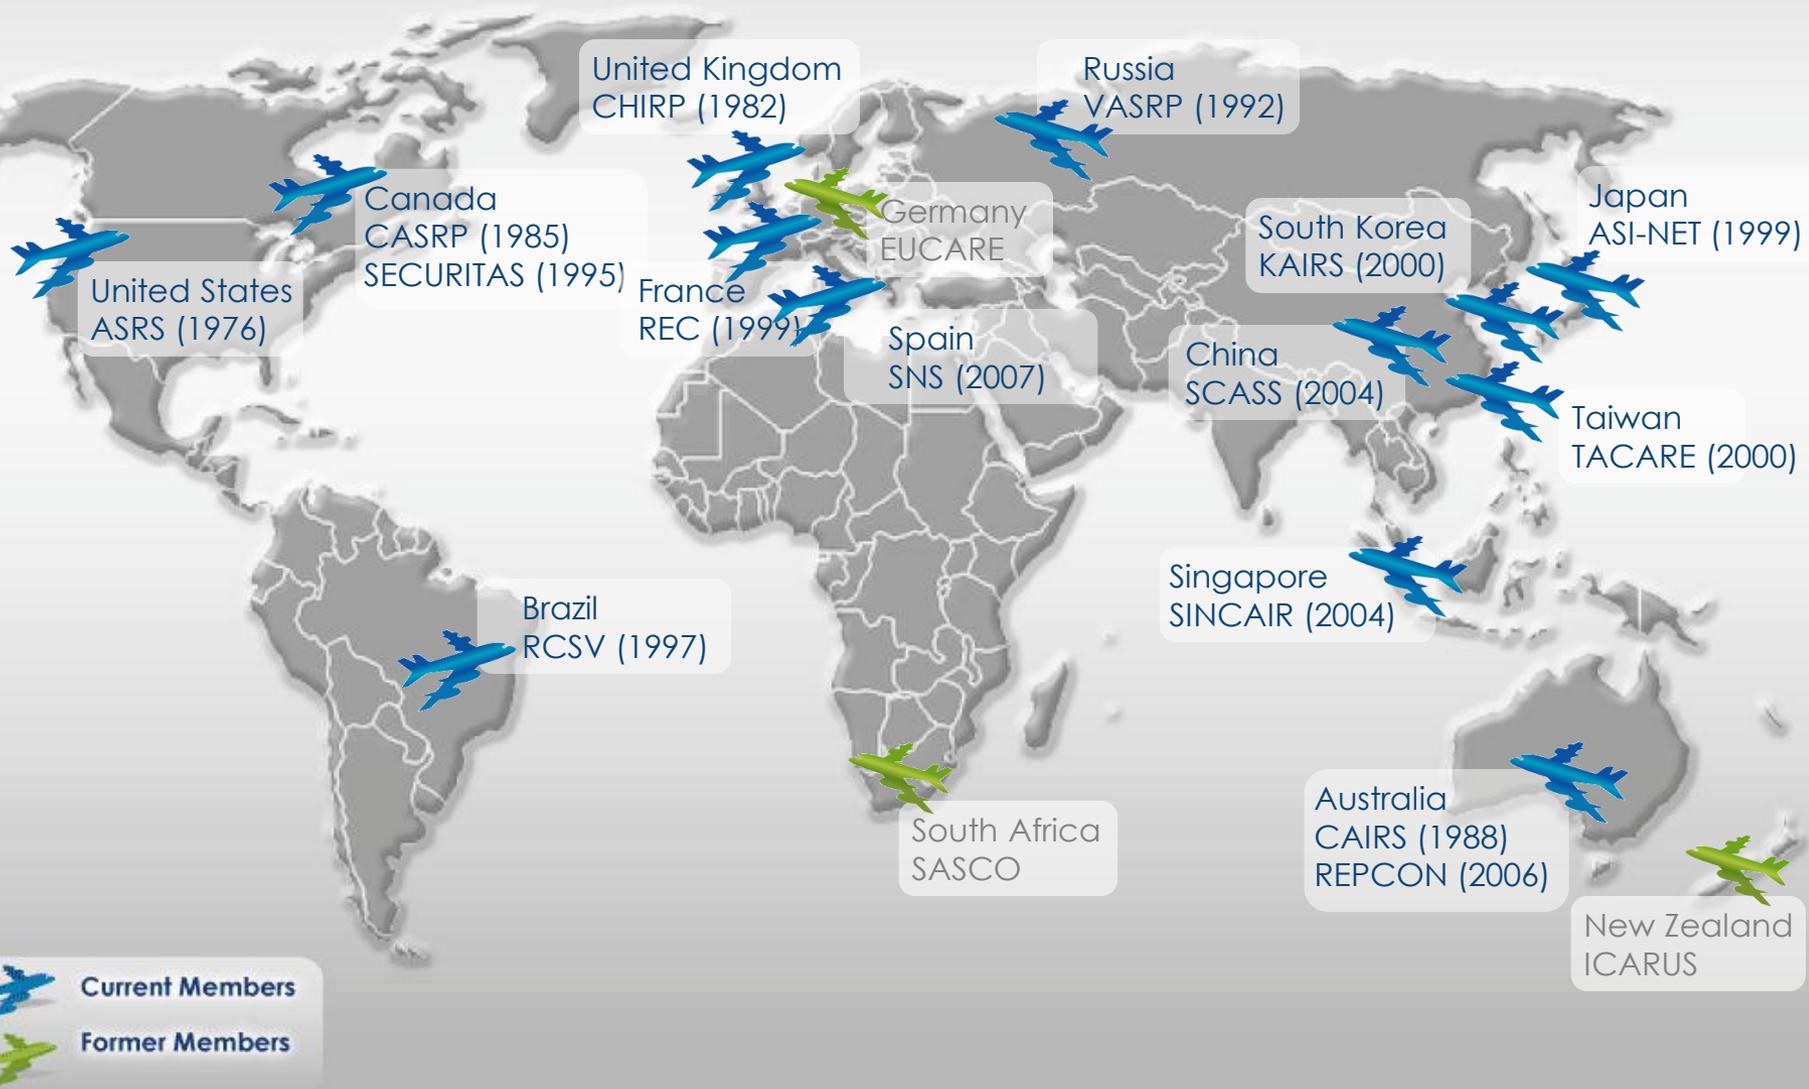

ASRS Model Applied to Aviation & Other Industries

February 2014

**AVIATION SAFETY
REPORTING SYSTEM**

International Confidential Aviation Safety Systems (ICASS)

ASRS Model Applied to Other Industries

- **Confidential Close Call Reporting System (C3RS)**
 - Railroad Safety Reporting System was modeled after ASRS
 - Under development at NASA ASRS through collaboration with Federal Rail Administration and Volpe National Transportation System Center
- **Fire Fighters Near Miss Reporting System**
 - Launched August, 2005 was modeled after ASRS
 - Development Task Force included FAA and NASA ASRS
- **Patient Safety Reporting System (PSRS)**
 - Dept of Veterans Affairs requested that NASA develop a medical reporting system modeled after the ASRS with external, independent, voluntary, confidential, & non-punitive features
 - FAA and NASA were highlighted in the Institute of Medicine (IOM) report, “To Err is Human” in 2000 which was launched nationwide concerning patient safety efforts.

NASA ASRS and Federal Railroad Administration Interagency Agreement signed on May 21, 2010

Confidential Close Call Reporting System
in the U.S Railroad Industry

Aviation Safety Reporting System

Your Voice Counts!

**Patient Safety
Reporting System**

**See It. Report It.
Make a Difference.**

VOLUNTARY • CONFIDENTIAL • NON-PUNITIVE

PSRS is a cooperative program between VA and NASA.

Unique Aspects of ASRS Confidential Reporting Model

System-Wide Perspective - capability to identify hazards identified by aviation personnel and match reports from all segments of aviation community

- ASRS was catalyst for recent FAA focus on Teterboro Departures

System-Wide Alerting - both national and international capability to provide ASRS Alert Messages to industry and government

Data Processing through Aviation Expert Analysts

- ASRS Office staff include Aviation Expert Analysts with a combined total of 380 years of experience in aviation (air carrier pilots, corporate pilots, general aviation pilots, air traffic control, and maintenance)
- Experts read and review 100% of reports and reliably code information to databases

Comprehensive and Time Tested Coding Taxonomy

- Fixed Field Codes combined with Narrative Text yields qualitative data for further secondary analysis techniques (Perilog, special studies, focused analytic techniques, etc)

Unique Aspects of ASRS Confidential Reporting Model

Strong Immunity and Legal Provisions

- Federal Law specifically addressing ASRS (14 CFR 91.25)
- FAA Advisory Circular 00-46E
- ASRS Addressed by Congress in 1980' s

Information Sharing - both nationally and internationally with industry and government

- Database Search Requests, Database Publically Available, Topical Studies, Structured Telephone Callback Studies, Collaborations with Industry and Gov' t (FAA, NTSB, NASA, TSA, etc.)
- Largest source of airline ASAP data collected in central location

National and International Reputation

- ASRS Recognized Model for Proactive Contribution to Safety Process
- ASRS Model Being Utilized by Other Domains for Safety Improvements
